Mountain Slide Dams Up Water in Creek and Many Fields Are Inundated.

By Boston American Leased Wire.

VALLEJO, Cal., May 2.—Early yesterday morning an earthquake was felt near the city of Vallejo, Cal., and the result was a landslide which dammed up the water in the creek and many fields were inundated.

The water is rising rapidly in this manner as to indicate that the general flow of the river has been impeded, while the regular course of the creek is dry. It is believed that the earthquake caused a mountain slide in the valley which dammed up the water in the creek and many fields were inundated.

The water is rising rapidly in this manner as to indicate that the general flow of the river has been impeded, while the regular course of the creek is dry. It is believed that the earthquake caused a mountain slide in the valley which dammed up the water in the creek and many fields were inundated.
